

Maintenance on the Move

A dedicated Mobile Maintenance Service to look after your decontamination equipment.

PPS Mass Decontamination equipment is designed to provide reliable operation in adverse conditions such as those likely to be met at any decontamination incident and the PPS Warranty is testament to the confidence we have in our products.

PPS realise that our equipment will be used in life or death situations and we take our responsibility very seriously. So, to ensure 100% operational efficiency, it is important to realise that a Maintenance Programme is crucial.

PPS has mobile workshops equipped and manned to carry out exhaustive maintenance checks and repairs on Mass Decontamination Showers, their related accessories and Personal Protection Equipment.

The service includes regular equipment audits to ensure that every component part of the set-up is ready for action. This is vital with decontamination equipment because any defect or failure can tip the balance between success or tragedy.

The increased awareness created by Homeland Defence strategies and recent Government warnings have highlighted the need to be prepared for any chemical, biological, radiological and nuclear incident.

Many agencies have implemented training initiatives that naturally involve practicing with our Mass Decontamination products and accessories. This increased use has made demands on the equipment that make regular maintenance even more important.

Take responsibility now and call PPS for more information on a Maintenance Package to suit your needs.
