

total care programme

SERVICE AND
MAINTENANCE

The PPS Total Care Programme has been introduced with approved service agents - Breathe Safety Services, to fulfil the requirements of current legislation for the care and maintenance of suits and associated respiratory protective equipment in the PPS range.

The client is given the satisfaction and peace of mind that their equipment is being serviced to a high standard by qualified and competent engineers - in compliance with relevant regulations and manufacturers requirements.

The following are provided within the tailored service programme:

- Monthly Service and Inspection for all types of PPS equipment
- Compressed air quality testing of Respiratory Protective Equipment (RPE)
- Optional Parts inclusive packages for fixed running costs
- Optional back up equipment options to ensure resources are not compromised

The Total Care Programme provides a single source for RPE Maintenance and relieves the client from peripheral maintenance duties, allowing them to concentrate on their core activities cost effectively.

SAFETY SERVICES

BREATHE WORKING FOR PPS

Professional Protection Systems undertake monthly test, inspection and record keeping providing the following advantages:

- 1. total Compliance with CoSHH on RPE.** CoSHH states that all respiratory equipment must be maintained at least monthly, by a competent person in accordance with the manufacturers' requirements.
- 2. total Guaranteed consistency of inspections and testing.** Where operators carry out maintenance on RPE, it is often neglected - subsequent audits by the HSE could reveal a lack of record keeping.
- 3. total Quality of inspection.** Our work is our profession - we ensure it is done properly, rather than RPE maintenance being tagged onto the operators main task. Faults that may get overlooked month to month, are rectified immediately if Professional Protection Systems undertake the contract.
- 4. total Workshop Facility.** Free repair options from our fully equipped workshop. Repair work that would otherwise be costly, is undertaken at the cost of parts only.
- 5. total Packages.** Special rates on other services - training, face fit testing and new equipment are provided at preferential rates if a client has a total care programme in operation.
- 5. total Peace of mind.** We take care of all your service requirements on RPE properly, allowing you to concentrate on your core activity.

EXTRACTS FROM COSHH REGULATIONS ON RESPIRATORY PROTECTION EQUIPMENT

176 The maintenance, examination and tests should be in accordance with the manufactures' instructions. Examinations should comprise a thorough visual examination of all parts of the respirator or breathing apparatus, to ensure that all parts are present, correctly fitted, and the equipment is in good working order. In particular, the examination should ensure that the straps, facepieces, filters and valves are sound and in good working condition.

EXTRACTS FROM COSHH REGULATIONS ON RESPIRATORY PROTECTION EQUIPMENT

178 The quality of the air supplied to breathing apparatus should be tested at least once every three months and more frequently when the quality of the air supplied cannot be assured.

EXTRACTS FROM COSHH REGULATIONS ON RESPIRATORY PROTECTION EQUIPMENT

179 Thorough maintenance examinations and, where appropriate, tests of items of RPE, other than one-shift disposable respirators, should be made at least once every month, and more frequently where the health risks and conditions of exposure are particularly severe.
