

PPS 'Safe Spaces' Open Day a fantastic success.

PPS is a leading UK manufacturer of decontamination equipment and personal protective equipment. We specialise in providing complete solution packages to a wide variety of hazard-prone industries.

For immediate release - Wednesday, 9th September

PPS is delighted to have launched our brand new Safe Spaces on Friday 4th September at our factory in Milton Keynes.

The culmination of months of hard work, the Safe Spaces represent a new era for PPS bringing our famous personal protective equipment to the hospitality sector.

We were thrilled with the response we had to the Safe Spaces and truly believe they can offer a safe and efficient way to help customers return to pubs and venues.

We were particularly grateful to both Milton Keynes MP's Iain Stewart and Ben Everitt for their support as well as Milton Keynes mayor, Councillor Andrew Geary.

Our Safe Spaces are designed to keep people safe from Covid-19 outdoors, whatever the weather.

This makes them ideal for pubs and venues who may be faced with the very real possibility of having to serve customers exclusively outdoors, particularly if they find themselves under local lockdown measures.

We've already seen success at The Hare Inn in Linslade who have been using Safe Spaces to safely serve customers outdoors.

The efficient design of our Safe Spaces means they can be erected and taken down in under 30 seconds, while still utilising the same PPS technology used in the PPE we provide to the NHS and frontline workers.

The Hare Inn have reported a huge influx of interest in the Safe Spaces, with customers not only feeling protected but crucially comfortable and relaxed.

The Safe Spaces are also ideal for sole traders and small businesses.

We were happy to welcome Sussex based candle manufactures Candle Cottage who have been using a Safe Space to trade securely without fear of infection.

The peace of mind Safe Spaces offer not only to small businesses but also to customers could be the crucial difference for many sole traders as we learn to live with Covid-19 for the foreseeable future.

We've even seen the security Safe Spaces can offer to clubs and groups with a local Milton Keynes drumming group utilising them in order to practice and perform safely outdoors.

Safe Spaces overview

Our Safe Spaces are designed with one thing in mind, safety.

Customers can truly relax knowing the same technology used to protect NHS workers during the pandemic is helping to keep them safe in a pub or venue.

At PPS we pride ourselves on our practicality and our Safe Spaces are no different.

Safe Spaces can be easily erected and taken down in under 30 seconds, making them a dream for venue staff.

As the pandemic continues staffing venues is proving challenging, especially when considering social distancing.

With our Safe Spaces staff won't be spending hours putting shelters up and taking them back down again at the end of the night, it will literally take a matter of seconds.

As serving customers outdoors looks to be the default option for pubs moving forwards as the pandemic continues our Safe Spaces offer elite level protection, with rapid assembly.

As ever with PPS products versatility is key, the Safe Spaces can be custom made to fit your business in any size and can feature removable doors, zips and curtains.

The Safe Spaces offer venues the ability to comfortably serve customers outside in a variety of ways, working for anything from afternoon tea to a beer garden.

As the effects of the pandemic continue to be felt across the hospitality industry we understand the importance of keeping venues open to generate income.

It's with that in mind that we're delighted to offer our Safe Spaces as part of a rental plan, meaning every venue can have access to the highest level of personal protection.

If you're interested in hiring or purchasing Safe Spaces please get in touch with Dave Parker our International Business Development Manager;
